RaQualia Pharma and Nissan Chemical Enter into License Agreement to Research for Neurological Therapeutics

RaQualia Pharma (Head office: Aichi, Japan, President: Masaki Sudo) and Nissan Chemical Corporation (Head office: Tokyo, Japan, President: Shinsuke Yagi) announced today the signing of a license agreement to research, develop and commercialize novel neurological therapeutics identified by Nissan Chemical.

RaQualia has dedicated efforts to expanding its pipeline as an innovative biotech company for future growth. Nissan Chemical has continued putting efforts into delivering first-in-class therapeutics for neurological disorders using its expertise. RaQualia has positioned the neurological disorders field as an important pillar and is actively engaged in utilizing innovative modalities and building a new drug discovery value chain.

Under the terms of the agreement, Nissan Chemical grants RaQualia an exclusive global license with sub-license right for certain know-how in the field of neurological disorders. Nissan Chemical will receive an upfront payment, milestone payments based on progress, and royalties on sublicensing. RaQualia will leverage Nissan Chemical know-how to discover and develop neurological therapeutics.

This collaboration is part of an initiative to build a drug discovery value chain generated from the combination of both companies' strengths. The integration of Nissan Chemical's proprietary drug discovery know-how with RaQualia's research and development capabilities will lead to the identification of new drug candidates in a short period.

About RaQualia Pharma Inc.

RaQualia Pharma's mission is "We brighten people's lives through the power of innovation." RaQualia Pharma strives to deliver new medications for diseases with limited treatment options. Guided by this philosophy, RaQualia Pharma is dedicated to the research and development of new medications through partnerships. RaQualia Pharma, as professionals in drug discovery, is focusing on research and development efforts with a primary focus on patients to create innovative, first-in-class therapeutic medications.
